

Ceng 382 Week 2

Continue from last week :

First, install git with this command: “ Winget install --id Git.Git -e --source winget “ using cmd or powershell.

After installing finished, you have to push your last week's codes to GitHub; to do, so follow these steps :

1. Open git bash by right-clicking from anywhere and, step by step, enter below commands
2. `git clone yourRepositoryLink`
3. `git checkout -b week1`
4. Copy paste your files in to the cloned folder
5. `git status`
6. `git add .`
7. `git commit -m "Added last week's files to week1 branch"`
8. `git push --set-upstream origin week1` (only on first push)
if not, it is first time pushing `git push origin week1`

This Weeks Task :

1. Using JavaScript, modify the login screen so that when a user attempts to log in and clicks the login button, their username and password are stored in an array in the background. Then, print all elements of this array to the console.
2. Add a live clock to your login page that updates in real time and applies the same fonts and CSS used on your website.
3. Implement a feature where pressing the 'H' key hides all HTML forms on the website, and pressing it again makes them reappear.
